# Chapter 1

## Installation

### 1.1 Windows

`https://trac.edgewall.org/wiki/TracInstall`

`easy_install Trac`

## Chapter 2

# Setup

<http://web.archive.org/web/20100324230430/http://how-to-solutions.com/how-to-install-trac-on-windows.html>

```
trac-admin C:\project_dir initenv
```

In Windows open up the project folder and go into the *conf* sub-directory. There's a file called *trac.ini* - open it in an editor like Notepad. You need to copy the following lines below and paste them into Notepad above the *header\_logo* section.

```
[components]
acct_mgr.admin.accountmanageradminpage = enabled
acct_mgr.api.accountmanager = enabled
acct_mgr.db.sessionstore = enabled
acct_mgr.htfile.htdigeststore = enabled
acct_mgr.pwhash.htdigesthashmethod = enabled
acct_mgr.web_ui.accountmodule = enabled
acct_mgr.web_ui.loginmodule = enabled
acct_mgr.web_ui.registrationmodule = enabled
trac.web.auth.loginmodule = disabled
```

Go to *project\_dir* and create a new text file called *passwd.txt* - leave the file blank.

Lastly let's give all anonymous users (those who aren't logged in) admin access. In the same CLI window type the following and hit Enter.

```
trac-admin C:\project_dir permission add anonymous TRAC_ADMIN
```

**Install AccountManager plugin now!** - see section below.

In CLI type the following and hit Enter.

```
tracd -p 8000 E:\project
```

Open up browser and paste:

`http://localhost:8000/.`

In the top right there's a tab called Admin - click on it. On the menu on the right click on *Configuration* and when the page loads select *HtDigestStore* where the filename is *C : \project\passwd.txt* and the realm is 'trac'.

Below *Configuration* is *Users* - click on it. Create yourself an admin account. Now using the menu go to *Permissions*. On the right of that page you will see the *Grant Permission* section. Use the subject field for the username you gave yourself on the Users page and select the *TRAC\_ADMIN* as *Action*. Click Add and you will see your username in the middle column of the page with *TRAC\_ADMIN* next to it. For the subject anonymous click on the *TRAC\_ADMIN* so it's ticked and then click on the *Remove* selected items button.

## 2.1 AccountManager plugin

1. download from <https://trac-hacks.org/wiki/AccountManagerPlugin>
2. unpack
3. run track server:

```
tracd -p 8000 projecf_dir
```

4. go to admin, plugins (left pane)
5. install from egg buton. egg file is in *dist* subdir of unpacked folder
